

dust monitoring

Iluka Resources—automatic dust monitoring

Perth / Australia

project summary

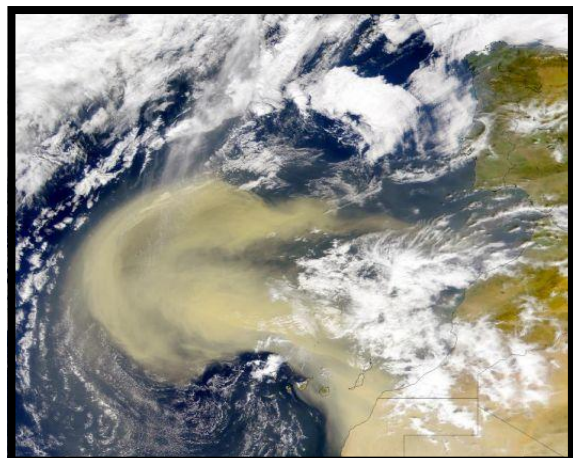

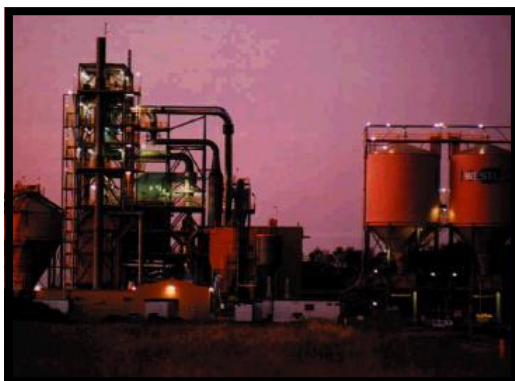

Iluka Resources operate a large mineral extraction and processing facility at their project site in Western Australia approx 3 hours north east of Perth.

To comply with strict environmental emissions standards, the owner is required to operate a network of Fully Automated Dust monitoring Stations around the project site. The first unit was installed and commissioned by Greenspan in 2002 and based on the successful operation of this first unit, we were engaged by the client to supply and install a second unit.

project features

- Air Conditioned Remote Monitoring Housing:
- Continuous Automatic Dust Recording Instrumentation (TEOM)
- Data Logging and Radio Telemetry Communications
- Full Factory configuration & testing
- Site Commissioning, Training & Handover
